Table of Contents

Introduction

What does it do?

This extension adds a new entry to the context sensitive menu to create a new page tree from a set of predefined page trees.

As an admin of a site you can create pages with sample content and/or configuration for plugins (tt_news, a discussion board, whatever). When an editor wants to create a new page, he can choose one out of these and has nothing has to be further configured.

Users manual

Click on a **page icon** in the page tree and select "New Page Tree" in the context menu in the section named 'Branch Actions'.

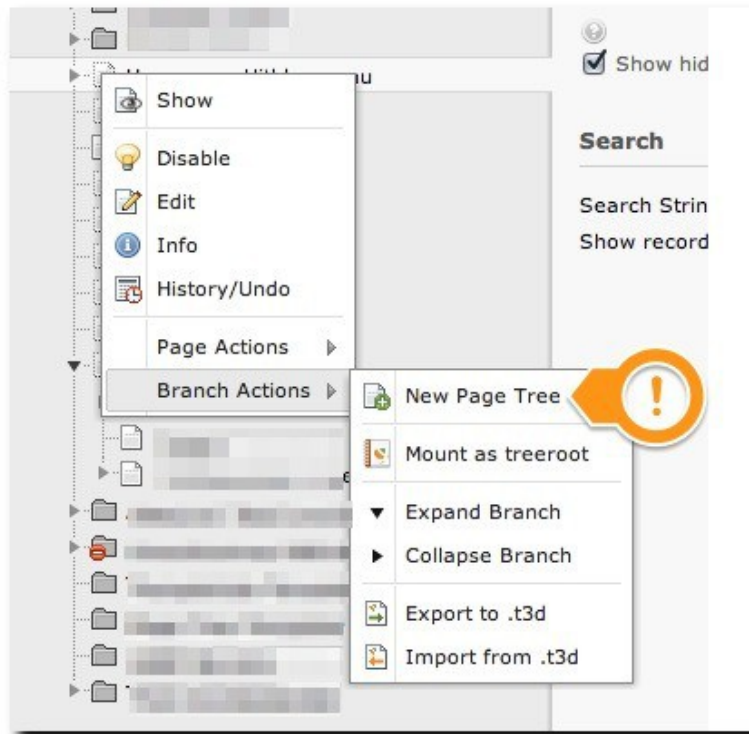

Illustration 1: Click on a page icon in the page tree
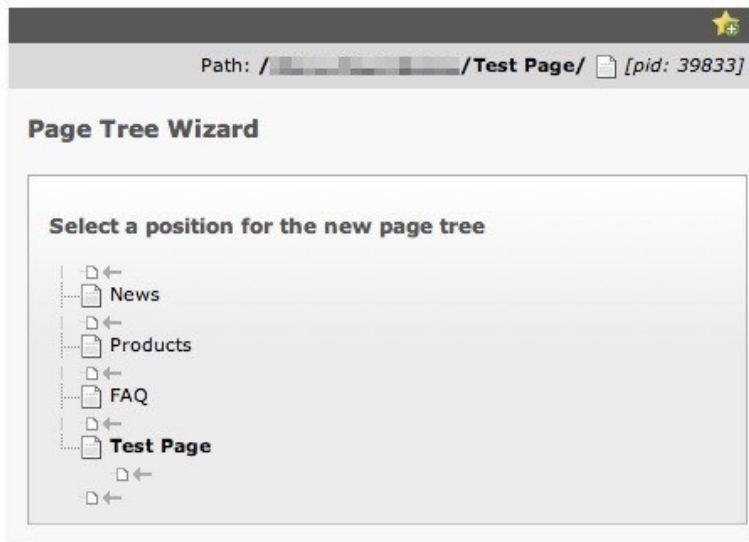

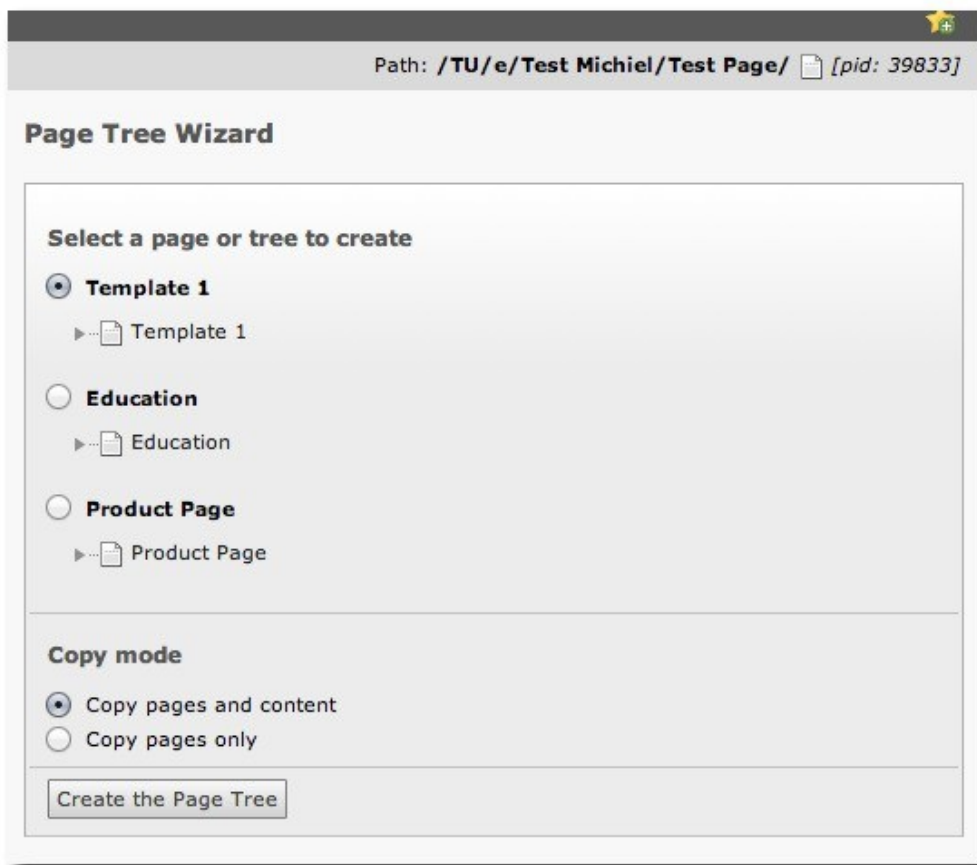

Choose the position of the new page tree.

Illustration 2: Select a position for the new page tree

Choose one of the predefined page trees.

Illustration 3: Choose one of the template trees and create the tree

After clicking Create the Page Tree, you will be redirected to the page properties of the newly created page.

Administration

Installation

Install the extension using the extension manager.

Configuration

The extension can be configured using TypoScript. You define a storage page. This is the uid of the page that you store your predefined page trees in.
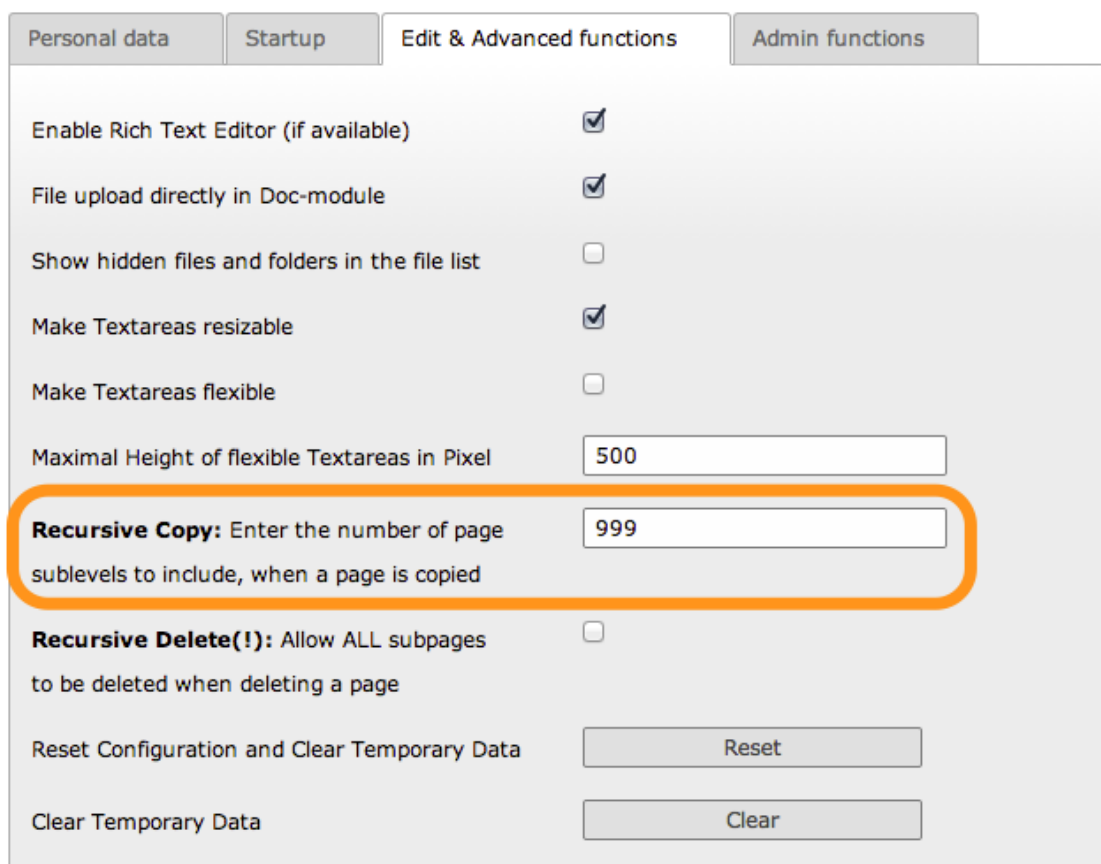

TypoScript Setup:

```
module.tx_pagewizard {
    persistence {
        storagePid = 123
    }
}
```

Any pages and page trees that exist in the folder / page with uid 123, will now show up in the Page Tree Wizard.

Make sure you can copy recursively.

- Go to user settings
- Edit & Advanced Functions
- Recursive Copy
- Enter the number of levels you wish to be able to copy

Illustration 4: Enable recursive copying

Sponsoring

If you also would like to sponsor the further development and bug fixing of this extension then contact me at: michiel_at_maxserv.nl

Known problems

If you find any problems, please report them over at forge:

http://forge.typo3.org/projects/extension-pagewizard/issues

Please take some time and make a proper report stating at least:

- version of the extension
- reproducibility
- steps to reproduce
- observed behavior
- expected behavior

Writing a good bug report will help us to fix the bugs faster and better.

TODO

Currently we have no TODO. If you have great innovative ideas, please let us know by posting a feature request:
